

RED LIGHT THERAPY

Bryan Johnson spends \$2M/year optimizing his body.

Red light therapy is in his daily protocol.

Here's what it looks like when you scale that to clinical grade.

IMAGE DIRECTION

Dark cinematic split-screen. Left: single consumer RLT panel, warm red glow, slightly underexposed. Right: interior of a glowing full-body clinical device, rich red and near-infrared light flooding every surface. No logos. White sans-serif text overlay, bottom-left. High contrast. Editorial quality.

HIS PROTOCOL

Bryan Johnson's daily RLT stack.

■ Laser cap

6 min · scalp

■ Face panel

Celluma Pro · daily

■ Full-body panels

12 min · 3× per week

■ FlexBeam

targeted recovery · as needed

4 devices. Multiple sessions. Every single day.

IMAGE DIRECTION

Clean flat-lay on matte black. Four devices arranged symmetrically: laser cap at top, small face panel, two vertical panels flanking center, curved targeted device at bottom. Soft red-toned product lighting. Minimalist white text labels. High-end editorial — not an ad.

THE PROBLEM

Consumer panels are built for bedrooms.

If you're running a clinic, medspa, or gym — you need a different conversation entirely.

Irradiance.

Wavelengths.

Sessions per day.

Durability.

These numbers determine your ROI.

IMAGE DIRECTION

A lone consumer RLT panel propped against a clinical treatment room wall — slightly out of place, small. Harsh overhead clinical lighting making it look inadequate. Room is professional — tiled, clean, equipment-ready. Visual tension intentional. No text overlay.

CLINICAL GRADE

Clinical grade isn't a marketing term. It's a spec sheet.

43,200 LEDs

5 wavelengths · 633 / 660 / 810 / 850 / 940nm

6,000W output

129 mW/cm² irradiance

360° full-body coverage

Every cell. Every session.

IMAGE DIRECTION

Dark background, data-visualization aesthetic. Human body silhouette at center glowing faintly with five colored light rays penetrating at different depths — each wavelength in its actual color. Numbers and wavelength labels float around the figure in clean type. Clinical, scientific, beautiful.

THE ROI

The math your accountant will like.

\$50 – \$200

per client session

8 sessions / day

standard clinic schedule

5 days / week

operating baseline

\$104K – \$416K

annual revenue from one device

Equipment cost pays itself back in weeks, not years.

IMAGE DIRECTION

Minimal white background. Clean table in black and brand-red. Three columns: Sessions/Day, Price/Session, Annual Revenue. Numbers large and bold. Equipment cost appears small at the bottom as a reference line. Design: Bloomberg terminal meets luxury spa brochure.

COMPETITOR WATCH

The market leader just received an FDA Class 2 recall.

COMPETITOR

~\$75K–\$95K

FDA Class 2 Recall

Gen 3.0 whole-body pod

AXRAH

\$24,999

No recall

5 wavelengths · 43,200 LEDs

The math writes itself.

IMAGE DIRECTION

Two columns, stark contrast. Left: muted gray, silhouetted competing device, small red 'recall' badge, large price figure. Right: full color AXRAH clinical system interior glowing warm, \$24,999 bold and clean. Balanced composition, right side radiates warmth and authority. No competitor logos.

MARKET SIZE

Your clients are already asking for this.

32% of US adults have tried or plan to try RLT

\$8.2B RLT bed market today

\$19.3B projected by 2032 · 13% CAGR

11.9% annual growth in clinical pod segment

The question is whether they find it at your clinic.

IMAGE DIRECTION

Editorial lifestyle photography. Diverse range: athlete mid-stretch, woman in medspa robe, older man with reading glasses — each in a separate minimal frame in a 3-panel grid. Warm red ambient light touches each image. Bold single-line stat in white text over solid dark band below.

READY TO RUN THE NUMBERS?

If you run a clinic, gym, medspa, or recovery center —

and you're serious about adding full-body red light therapy to your offering —

DM us "SYSTEM" for your custom ROI breakdown.

No pitch. Just numbers.

IMAGE DIRECTION

Full-bleed shot from client perspective — lying inside the clinical device, looking up through open canopy at ceiling of LEDs glowing in red and near-infrared. Intimate, aspirational, slightly cinematic. The word "SYSTEM" appears in minimal white type, center-bottom. Nothing else.

AXRAH

INSTAGRAM CAPTION

Bryan Johnson built a \$2M annual health stack around red light therapy.

For clinics, the math looks very different.
